- Contributors
- Foreword
  - List of Illustrations
  - List of Tables
- **Part I. Key Critical Care Concepts**
  - 1. Evaluation and triage of the critically ill patient
    - Introduction
    - Primary survey
    - Supporting diagnostics
    - Summary
    - Selected references
    - References
  - 2. Physical examination and daily assessment of the critically ill patient
    - Physical examination
    - Point-of-care ultrasound
    - Monitoring and laboratory data
    - Drug dosages and metabolism
    - Nutrition
    - Nursing care
    - References
  - 3. Hemostasis
    - Overview of platelet structure and function
    - Primary hemostasis and the three-stage model of platelet activation
    - Secondary hemostasis
    - Overview of fibrinolysis
    - Immunothrombosis
    - Summary
    - References
  - 4. Cardiopulmonary resuscitation
    - Preparedness and prevention
    - Basic life support
    - Monitoring
    - Advanced life support

- Open-chest CPR
- Prognosis
- References
- 5. Postcardiac arrest care
  - Propagating sustained ROSC
  - Systemic response to ischemia and reperfusion: Sepsis-like syndrome
  - Post-cardiac arrest brain injury
  - Neurologic assessment and prognostication
  - Myocardial dysfunction
  - Persistent precipitating pathology
  - References
- 6. Classification and initial management of shock states
  - Pathophysiology
  - Clinical presentation of circulatory shock
  - Diagnostics and monitoring
  - Treatment
  - References
- 7. SIRS, MODS, and sepsis
  - Background
  - Evolution of definitions
  - Assessment of MODS severity
  - The apple score
  - Assessment of animals with SIRS or MODS
  - Summary
  - References
- 8. Oxygen toxicity
  - Pathophysiology
  - Cellular effect of oxidative injury
  - Ischemia-reperfusion injury
  - Clinical effects of hyperoxia
  - Hyperoxia in the critically ill
  - Hyperbaric oxygen therapy
  - Antioxidants
  - Prevention and treatment of oxygen toxicity
  - References
- 9. The endothelial surface layer
  - Introduction
  - The importance of the ESL in critical illness
  - Structure and function
  - Fluid movement across the endothelium
  - Shedding of the ESL
  - Methods for detection of ESL shedding
  - ESL shedding in dogs and cats
  - Protection of the ESL in disease
  - Conclusion
  - References
- 10. Hyperthermia and fever
  - Thermoregulation
  - Hyperthermia
  - True fever

- Inadequate heat dissipation
- Benefits and detriments of fever
- Clinical approach to the hyperthermic patient
- Nonspecific therapy for febrile patients
- The febrile intensive care patient
- References
- 11. Interstitial edema
  - Microvascular filtration
  - Lymphatic drainage
  - Serosal transudation
  - Antiedema mechanisms
  - Mechanisms of edema formation
  - Chronic edemagenic conditions
  - Conclusion
  - References
- 12. Patient suffering in the intensive care unit
  - Maslow's hierarchy of needs and primal alert signals
  - References
- 13. Predictive scoring systems in veterinary medicine
  - Definition
  - Outcome probability vs. clinical decision aid tools
  - Applications in clinical practice
  - Applications in hospital management
  - Applications in research
  - Demonstration of effective or ineffective randomization in randomized controlled trials
    - Reduction of required sample sizes
    - Construction of scoring systems
    - Critical appraisal
    - Conclusion
    - References

## • **Part II. Respiratory Disorders**

- 14. Control of breathing
  - Central control of breathing
  - Descending pathways
  - Chemoreceptors and response to blood gases
  - Other sensory receptors
  - Abnormalities in the control of breathing
  - References
- 15. Oxygen therapy
  - Arterial oxygen content
  - Indications for oxygen therapy
  - Methods of oxygen administration
  - Complications of oxygen therapy
  - References
- 16. Hypoxemia
  - Collection of blood samples for in vitro measurement
  - Recognition of hypoxemia

- Mechanisms of hypoxemia
- Estimating the magnitude of the venous admixture
- References
- 17. Hypoventilation
  - Definitions and measurement
  - Mechanisms and etiologies of hypercapnia
  - Clinical signs
  - Diagnosis
  - Treatment
  - References
- 18. Upper airway disease
  - History and clinical signs
  - Patient evaluation
  - Stabilization of patients with upper airway obstruction
  - Diagnostics
  - Diseases of the upper airway
  - References
- 19. Tracheal collapse: Management & indications for tracheal stents
  - Etiology
  - Clinical signs
  - Diagnostic evaluation
  - Medical management
  - Tracheal rings
  - Tracheal stenting
  - Post-stenting management considerations
  - Tracheal stent complications
  - Stenting for tracheal neoplasia
  - References
- 20. Feline bronchopulmonary disease
  - History and physical examination
  - Laboratory testing
  - Lung function testing
  - Airway sampling
  - Treatment
  - Prognosis
  - References
- 21. Lower airway disease in dogs
  - Introduction
  - Diagnosis of underlying conditions
  - Standard treatment
  - Disease exacerbation
  - Conclusion
  - References
- 22. Pulmonary hypertension
  - Definitions and terminology
  - Pathophysiology
  - Assessment of PH
  - Classification of PH
  - Clinical findings
  - Diagnostic evaluation

- Clinical management
- Prognosis and monitoring
- References
- 23. Pulmonary edema
  - Pathophysiology
  - Clinical presentation
  - Diagnostic tests
  - Treatment
  - Prognosis
  - References
- 24. Pneumonia
  - Pathology
  - Pathophysiology
  - Specific types of pneumonia
  - Clinical features
  - Diagnostic approach
  - Therapeutic approach
  - Prevention
  - Prognosis and outcome
  - References
- 25. Acute respiratory distress syndrome
  - Introduction
  - Pathophysiology
  - Causes/risk factors
  - Diagnostic criteria
  - Management
  - Prognosis
  - References
- 26. Pulmonary contusions and hemorrhage
  - Pathophysiology and pathology
  - Diagnosis
  - Management
  - Prognosis and outcome
  - Atraumatic pulmonary hemorrhage
  - Diagnostic evaluation
  - Treatment
  - Prognosis and outcome
  - References
- 27. Pulmonary thromboembolism
  - Pathophysiology
  - History and clinical signs
  - Physical examination
  - Diagnostic testing
  - Classification of acute pulmonary thromboembolism
  - Treatment and prophylaxis
  - References
- 28. Chest wall disease
  - Chest wall anatomy and function
  - Diagnosis of chest wall disease
  - Causes of chest wall disease

- Spinal cord and neuromuscular disease
- Obesity
- References
- 29. Pleural space disease
  - Pleural space
  - Physical examination
  - Imaging
  - Thoracocentesis
  - Pleural effusion
  - Pneumothorax
  - Diaphragmatic hernia
  - Reexpansion pulmonary edema
  - Acknowledgment
  - References
- 30. Respiratory distress look-alikes
  - Introduction
  - Control of respiration
  - Extrapulmonary causes of decreased oxygen delivery
  - Metabolic derangements
  - Hyperthermia
  - Behavioral
  - Brain disease
  - Drugs
  - Summary
  - References

- **Part III. Advanced Respiratory Support**

- 31. High flow nasal oxygen
  - Introduction
  - Physiological benefits of high flow nasal oxygen (see Box 31.1)
  - High flow nasal oxygen in small animal critical care
  - Practical guidance for using high flow nasal oxygen
  - References
- 32. Mechanical ventilation—core concepts
  - Physiology
  - The ventilator breath
  - Ventilator settings
  - Ventilator alarms
  - Indications for mechanical ventilation
  - Initiation of mechanical ventilation
  - Goals
  - Complications
  - Troubleshooting
  - Prognosis
  - References
- 33. Mechanical ventilation—advanced concepts
  - Introduction
  - Patient–ventilator asynchrony
  - Lung protective ventilation

- Refractory hypoxemia
- Pressure modes of advanced mechanical ventilation
- References
- 34. Jet ventilation
  - Physics and physiology
  - Equipment
  - Indications
  - Disadvantages
  - Monitoring of gas exchange during jet ventilation
  - Ventilator settings
  - References
- 35. Ventilator waveforms
  - Waveform types
  - Patient–ventilator dyssynchrony
  - Summary
  - References
- 36. Anesthesia and monitoring of the ventilator patient
  - Injectable anesthetics
  - Adjunct agents
  - Making an anesthesia plan for the ventilator patient
  - Withdrawal of anesthesia for ventilator weaning
  - Monitoring of the mechanically ventilated patient
  - References
- 37. Nursing care of the ventilator patient
  - General monitoring
  - Airway management
  - Oral care
  - Eye care
  - Urinary care
  - Gastrointestinal tract care
  - Recumbent patient care
  - Apparatus care
  - References
- 38. Discontinuing mechanical ventilation
  - When to wean
  - Anesthetic considerations
  - Approaches to weaning
  - Weaning prediction
  - Tracheostomy and weaning
  - Extubation
  - References
- 39. Ventilator-induced lung injury
  - Definitions
  - Mechanisms of ventilator-induced lung injury
  - Histopathology
  - Clinical relevance
  - Prevention
  - References
- 40. Ventilator-associated pneumonia
  - Pathogenesis

- Diagnosis
- Prevention
- Treatment
- References

- **Part IV. Cardiovascular Disorders**

- 41. Mechanisms of heart failure
  - Neurohormonal aspects of heart failure
  - Myocardial remodeling
  - Abnormal calcium ion handling
  - Abnormal myocardial energy production
  - Global cardiac function
  - Clinical staging and assessment of heart failure
  - References
- 42. Ventricular failure and myocardial infarction
  - Diagnosis
  - Treatment
  - References
- 43. Feline cardiomyopathy
  - Classification and etiology of feline cardiomyopathy
  - Pathophysiology
  - Clinical presentation and findings
  - Diagnostic approach
  - Treatment
  - References
- 44. Canine cardiomyopathy
  - Dilated cardiomyopathy
  - Arrhythmogenic right ventricular cardiomyopathy
  - Hypertrophic cardiomyopathy
  - Atrioventricular myopathy
  - References
- 45. Canine myxomatous mitral valve disease
  - Introduction
  - Pathology and pathophysiology
  - Historical and physical examination findings
  - Clinicopathologic findings and cardiac biomarkers
  - Thoracic radiographic findings
  - Cardiac and thoracic ultrasound findings
  - Emergency management
  - Management of complicating factors
  - Monitoring
  - Long-term management
  - Prognosis
  - References
- 46. Blunt cardiac injury
  - Definitions and pathogenesis
  - Diagnosis and clinical assessment
  - Treatment
  - Summary

- References
- 47. Pericardial diseases
  - Pericardial effusion
  - Cardiac tamponade
  - Clinical presentation
  - Diagnosis
  - Management of cardiac tamponade
  - Constrictive pericardial disease
  - Congenital pericardial disease
  - References
- 48. Bradyarrhythmias and conduction disturbances
  - Definition
  - Differential diagnosis
  - Treatment
  - References
- 49. Supraventricular tachyarrhythmias
  - Introduction
  - Electrocardiographic diagnosis
  - Treatment
  - References
- 50. Ventricular tachyarrhythmias
  - Introduction
  - Definitions
  - Electrocardiographic diagnosis
  - Causes of ventricular tachycardia
  - Practical approach to ventricular tachycardia treatment
  - References
- 51. Myocarditis
  - Infectious myocarditis
  - Noninfectious myocarditis
  - Diagnosis
  - Treatment
  - References
- 52. Cardiac biomarkers
  - Blood-based cardiac biomarkers
  - Clinical use of NT-proBNP and BNP testing in the emergency setting
  - Clinical use of cardiac troponin in the emergency setting
  - Important limitations and considerations involving cardiac biomarker testing
  - References
- 53. Systemic hypertension
  - Normal determinants of blood pressure
  - Pathogenesis of systemic hypertension
  - Definitions and causes of systemic hypertension
  - Adverse effects associated with systemic hypertension
  - Diagnosis of systemic hypertension
  - Treatment of systemic hypertension
  - References
- 54. Cardiopulmonary bypass
  - Introduction
  - Fundamentals of cardiopulmonary bypass

- Postoperative management and complications
- Summary
- Acknowledgments
- References
  
- **Part V. Electrolyte and Acid-Base Disturbances**
  
- 55. Sodium disorders
  - Distribution of body water
  - Osmolality and osmotic pressure
  - Regulation of plasma osmolality
  - Total body sodium content versus plasma sodium concentration
  - Hypernatremia
  - Hyponatremia
  - Clinical signs of hyponatremia
  - A rapid drop in plasma sodium concentration and cerebral edema
  - Volume expansion in the hypovolemic patient that is hyponatremic or hypernatremic
  - References
- 56. Potassium disorders
  - Normal distribution of potassium in the body and its steady state regulation
  - Hypokalemia: Definition and causes
  - Management of hypokalemia
  - Anticipated complications
  - Hyperkalemia: Definition and causes
  - Pseudohyperkalemia
  - Consequences
  - Treatment of hyperkalemia
  - Acknowledgements
  - References
- 57. Calcium disorders
  - Calcium homeostasis
  - Calcium measurement
  - Hypercalcemia
  - Hypocalcemia
  - References
- 58. Magnesium and phosphate disorders
  - Magnesium
  - Phosphate
  - References
- 59. Traditional acid-base analysis
  - Introduction
  - Sample collection and handling
  - Traditional approach
  - Acid-base analysis
  - Causes of acid-base abnormalities
  - Bicarbonate therapy
  - References
- 60. Nontraditional acid-base analysis
  - The strong ion difference approach

- Semiquantitative approach
- Conclusion
- Clinical examples
- References
- 61. Hyperlactatemia
  - Biochemistry
  - Physiology
  - Etiology of hyperlactatemia
  - d-lactate
  - Clinical use
  - Prognostic use
  - Diagnostic use
  - Lactate as a therapeutic endpoint
  - References
- 62. Urine osmolality and electrolytes
  - Introduction
  - Urine osmolality
  - Urinary sodium
  - Urine potassium
  - Urine chloride
  - Free water clearance
  - References
- **Part VI. Fluid Therapy**
- 63. Assessment of hydration
  - Variability in assessing hydration
  - Distribution and control of total body water
  - Measuring total body water
  - Clinical assessment of hydration status
  - Hypotonic fluid loss
  - Isotonic fluid loss
  - Special challenges
  - Conclusion
  - References
- 64. Assessment of intravascular volume
  - Introduction
  - Defining a fluid bolus
  - Mini-bolus and passive leg raising
  - Conclusions
  - References
- 65. Crystalloids and hemoglobin-based oxygen-carrying solutions
  - Crystalloids
  - Hypotonic fluids
  - Hypertonic fluids
  - Acid-base effects of crystalloids
  - Hemoglobin-based oxygen-carrying solutions
  - Conclusion
  - Acknowledgement
  - References

- 66. Colloid solutions
  - Synthetic starch colloids
  - Natural colloids
  - Conclusion
  - References
- 67. Daily intravenous fluid therapy
  - Total body water
  - Movement of fluids within the body
  - Fluid therapy plan
  - Fluid type
  - Monitoring
  - Discontinuation of fluid therapy
  - Acknowledgements
  - References
- 68. Shock fluids and fluid challenge
  - Administration of shock fluids
  - Resuscitation endpoints and monitoring
  - Shock fluids
  - Hypotensive resuscitation
  - Fluid challenge
  - References
- 69. Transfusion medicine
  - Introduction
  - Anemia and RBC transfusions
  - Platelet transfusions
  - Plasma transfusions
  - Albumin transfusions
  - Blood sources and donor management
  - Blood donation
  - Blood banking
  - References
- 70. Blood types, pretransfusion compatibility, and transfusion reactions
  - Blood types
  - Precompatibility testing
  - Transfusion reactions
  - Storage lesion
  - Leukoreduction
  - Transfusion administration and monitoring
  - References
- 71. Hemorrhagic shock
  - Assessment of the hemorrhagic shock patient
  - Management of controlled hemorrhage
  - Management of uncontrolled hemorrhage
  - Special considerations
  - References

- **Part VII. Endocrine Disorders**

- 72. The diabetic patient in the ICU

- Insulin
- Nutritional support
- References
- 73. Diabetic ketoacidosis
  - Pathophysiology
  - Signalment
  - History and clinical manifestation
  - Diagnosis
  - Additional diagnostic evaluation
  - Therapy
  - Outcome
  - References
- 74. Hyperglycemic hyperosmolar syndrome
  - Pathogenesis
  - History and clinical signs
  - Physical examination
  - Diagnostic criteria
  - Treatment
  - Monitoring
  - Postcrisis therapy
  - Prognosis
  - References
- 75. Hypoglycemia
  - Normal glucose homeostasis
  - Clinical signs and consequences of hypoglycemia
  - Diagnosis of hypoglycemia
  - Causes of hypoglycemia
  - Treatment of hypoglycemic crisis
  - References
- 76. Diabetes insipidus
  - Osmotic regulation and pathophysiology of diabetes insipidus
  - Implications of diabetes insipidus in the critically ill patient
  - References
- 77. Syndrome of inappropriate antidiuretic hormone secretion
  - Normal physiology
  - Syndrome of inappropriate antidiuretic hormone
  - Etiology
  - Diagnosis
  - Management
  - References
- 78. Thyroid storm
  - Pathogenesis
  - Precipitating events
  - Clinical signs
  - Diagnosis
  - Laboratory abnormalities
  - Treatment
  - Outcome
  - References
- 79. Hypothyroid crisis in the dog

- Pathophysiology
- Risk factors
- Clinical signs and physical examination findings
- Clinical pathology
- Differential diagnosis
- Treatment
- Outcome
- References
- 80. Pheochromocytoma
  - Clinical signs
  - Diagnosis
  - Treatment
  - Prognosis
  - References
- 81. Critical illness-related corticosteroid insufficiency
  - Background
  - Pathophysiology
  - Clinical manifestations
  - Diagnosing CIRCI in people
  - Diagnosing CIRCI in dogs and cats
  - Treating CIRCI in people
  - Treating CIRCI in dogs and cats
  - Prognosis
  - References
- 82. Hypoadrenocorticism
  - Who is affected?
  - Etiology
  - Clinical presentation
  - Diagnosis
  - Treatment
  - Associated disorders
  - Prognosis
  - References
- **Part VIII. Neurologic Disorders**
  - 83. Neurological evaluation of the ICU patient
    - Mentation
    - Gait and posture
    - Cranial nerves
    - Proprioceptive positioning
    - Segmental reflexes
    - Sensation/nociception
    - Neurologically abnormal
    - Clinical challenges in the critical patient with neurological disease
    - Next steps
    - References
  - 84. Seizures and status epilepticus
    - Definitions
    - Classification

- Pathophysiology
- Etiology
- Diagnostic plan
- Treatment plan
- References
- 85. Intracranial hypertension
  - Normal physiology of the brain
  - Clinical assessment of intracranial hypertension
  - Treatment of ICH
  - Prognosis
  - References
- 86. Tetanus
  - Etiology
  - Pathogenesis
  - Clinical presentation
  - Diagnosis
  - Treatment
  - Prognosis
  - References
- 87. Hepatic encephalopathy
  - Causes of hepatic encephalopathy
  - Diagnosing hepatic encephalopathy
  - Managing hepatic encephalopathy
  - References
- **Part IX. Infectious Disorders**
- 88. Hospital-associated infections and zoonoses
  - HAI in dogs and cats
  - Risk factors
  - Antimicrobial-resistant nosocomial pathogens
  - Zoonoses, anthroozoonoses and HAI's in the ICU
  - Conclusions
  - References
- 89. Febrile neutropenia
  - Neutrophil physiology
  - Pathophysiology of neutropenia
  - Clinical presentation and diagnostic tests
  - Treatment and supportive care
  - References
- 90. Sepsis and septic shock
  - Introduction
  - Current sepsis definitions
  - Pathobiology of sepsis
  - Diagnosis
  - Resuscitation and treatment of sepsis and septic shock
  - Prognosis
  - References
- 91. Bacterial infections
  - Introduction

- Bacterial structure and taxonomy
- Diagnosis of bacterial infections
- Gram-positive bacteria of clinical importance
- Gram-negative bacteria of clinical importance
- Mycoplasma and intracellular bacteria of clinical importance
- Treatment and prevention of bacterial infections
- Conclusion
- References
- 92. Fungal infections
  - Fungal organisms
  - Diagnosis
  - Treatment and outcome
  - References
- 93. Viral infections
  - Canine distemper virus infection
  - Influenza virus infections
  - Other emerging respiratory viral infections of dogs
  - Feline panleukopenia
  - Feline respiratory viral disease
  - Feline infectious peritonitis
  - Severe acute respiratory syndrome coronavirus-2
  - References
- 94. Canine parvovirus infection
  - Parvoviridae
  - Epidemiology
  - Risk factors for infection
  - Transmission and pathogenesis
  - Clinical signs
  - Clinical pathology
  - Sepsis, systemic inflammatory response syndrome, and coagulation
  - Diagnostic investigations
  - Diagnostic imaging
  - Treatment
  - Nutrition
  - Antiviral drugs
  - Outpatient protocol
  - Controversial therapies
  - Prevention of transmission
  - Prognosis
  - References
- 95. Infective endocarditis
  - Pathophysiology
  - Incidence, signalment, and presenting complaint
  - Predisposing factors
  - Etiologic agents
  - Clinical abnormalities
  - Clinicopathologic abnormalities
  - Diagnosis
  - Treatment
  - Prognosis

- References
- 96. Urosepsis
  - Introduction
  - Pathogenesis
  - Causes of urosepsis
  - Conclusion
  - References
- 97. Necrotizing soft tissue infections
  - Diagnosis
  - Treatment
  - Extracorporeal plasma treatment
  - Conclusion
  - References
- 98. Catheter-related bloodstream infections
  - Pathophysiology
  - Definitions
  - Risk factors
  - Incidence
  - Diagnosis
  - Treatment
  - Prevention
  - Acknowledgements
  - References
- 99. Multidrug-resistant infections
  - Definitions
  - Risk factors for multidrug-resistant organisms
  - Escalation versus deescalation therapy
  - Specific multidrug-resistant organisms
  - References
- 100. Infectious disease control in the ICU
  - Health care-associated infections and biosafety
  - HCAs in intensive care settings
  - HCAI prevention and control
  - Surveillance
  - Active infection control
  - Feedback to stakeholders
  - Dedicated biosafety team
  - References

- **Part X. Hematologic Disorders**

- 101. Hypercoagulable states
  - Mechanisms of thrombophilia
  - Diagnostics
  - Common conditions in veterinary medicine
  - Management of hypercoagulable conditions
  - Conclusion
  - References
- 102. Feline aortic thromboembolism
  - Introduction

- Pathophysiology
- Clinical presentation
- Diagnosis
- Prognosis
- Thrombolysis in fate
- Antiplatelet therapy in fate
- Anti-coagulant therapy in fate
- Nursing and supportive care in fate
- Prevention of fate
- References
- 103. Platelet disorders
  - Acquired thrombocytopenia
  - Acquired platelet disorders
  - Congenital platelet disorders
  - General diagnostic approach to platelet disorders
  - Treatment of platelet disorders
  - References
- 104. Coagulopathy in the ICU
  - Normal hemostasis
  - Abnormal bleeding tendency
  - Clinical signs associated with hemostatic dysfunction
  - Laboratory tests for hemostasis
  - Hemostatic disorders in critically ill animals
  - Therapeutic management of coagulopathy
  - References
- 105. Management of the bleeding patient in the ICU
  - Diagnostic approach to a bleeding patient
  - Treatment of the bleeding patient
  - Suggested reading
  - References
- 106. Anemia in the ICU
  - Introduction
  - Oxygen transport by erythrocytes
  - Erythropoiesis
  - Physiological adaptation to anemia
  - Characterization of anemia
  - Clinical approach to anemia in the ICU
  - Therapeutic approach to anemia
  - References
- 107. Dyshemoglobinemias
  - Introduction
  - Causes of dyshemoglobinemia
  - Diagnosis of dyshemoglobinemias
  - References
- 108. Acute hemolytic disorders
  - Evaluation of the patient with hemolysis
  - Fragmentation hemolysis
  - Toxicant-induced hemolysis
  - Heritable hemolysis
  - Infection-related hemolysis

- Immune-mediated hemolysis
- References

- **Part XI. Intraabdominal Disorders**

- 109. Acute abdominal pain
  - Diagnostic evaluation
  - Surgical versus medical management
  - References
- 110. Acute pancreatitis
  - Pathophysiology
  - Clinical presentation
  - Diagnosis
  - Determining severity
  - Treatment
  - Outcome
  - Conclusion
  - References
- 111. Acute cholecystitis
  - Clinical findings
  - Common causes of cholecystitis in dogs and cats
  - Conclusion
  - References
- 112. Hepatitis and cholangiohepatitis
  - Introduction
  - Historical findings
  - Physical examination findings
  - Causes of hepatitis and cholangiohepatitis in dogs and cats
  - References
- 113. Hepatic failure
  - Pathophysiology
  - Clinical signs
  - Diagnosis
  - Therapy
  - Prognosis
  - Future therapies
  - References
- 114. Portal hypertension
  - Pathogenesis of PH
  - Classification of PH
  - Diagnosis of PH
  - Clinical consequences of PH
  - Treatment of PH
  - References
- 115. Portosystemic shunt management
  - Preoperative stabilization
  - Medical management
  - Surgical options
  - Postoperative monitoring
  - Postoperative complications

- Prognosis
- References
- 116. Acute gastroenteritis
  - Gastroenteritis
  - History and physical examination
  - Diagnostic testing
  - Therapeutic approach
  - Prognosis
  - References
- 117. Gastrointestinal hemorrhage
  - Etiology
  - History and physical examination
  - Diagnostic tests
  - Treatment
  - Prognosis
  - References
- 118. Regurgitation and vomiting
  - Differentiation of vomiting and regurgitation
  - Regurgitation
  - Vomiting
  - Conclusion
  - References
- 119. Diarrhea
  - Pathophysiologic mechanisms of diarrhea
  - Iatrogenic causes of diarrhea
  - Primary gastrointestinal causes of diarrhea
  - Extra-gastrointestinal diseases causing diarrhea
  - Diagnostic evaluation
  - Treatment
  - Conclusions
  - References
- 120. Peritonitis
  - Etiology
  - Diagnostics
  - Treatment
  - Postoperative therapy and monitoring
  - Conclusion
  - References

- **Part XII. Urogenital Disorders**

- 121. Acute kidney injury
  - Etiology
  - Pathophysiology
  - Clinical presentation
  - Diagnosis
  - Treatment
  - Prognosis
  - References
- 122. Chronic kidney disease

- Etiology
- Pathophysiology
- Clinical presentation
- Diagnosis
- Treatment
- Long-term management
- Advanced therapeutic modalities
- Prognosis
- References
- 123. Kidney transplantation
  - Indications
  - Case selection
  - Donor selection
  - Preoperative management
  - Anesthetic management
  - Surgery
  - Postoperative management and perioperative complications
  - Long-term management and complications
  - Canine transplantation
  - Conclusion
  - References

- **Part XIII. Nutrition**

- 124. Nutritional assessment
  - Impacts of nutritional support during critical illness
  - Screening systems used for nutritional assessments
  - Conclusion
  - References
- 125. Nutritional modulation of critical illness
  - Omega-3 fatty acids
  - Antioxidants
  - Immune-modulating nutrients
  - Nucleotides
  - Probiotics
  - Conclusion
  - References
- 126. Enteral nutrition
  - Introduction
  - Importance of nutritional support
  - Pathophysiology of malnutrition
  - Nutritional assessment
  - Assessing nutritional needs
  - When to initiate feeding
  - Choosing the most appropriate feeding tube
  - Nutritional plan
  - Implementing nutritional plan
  - Monitoring and reassessment
  - Complications
  - Conclusions

- References
- 127. Parenteral nutrition
  - Introduction
  - Indications for PN support
  - Parenteral nutrition
  - Components of parenteral nutrition
  - Formulation of parenteral nutrition solutions
  - Administering parenteral nutrition
  - Monitoring
  - Complications
  - Summary
  - References
- **Part XIV. Trauma**
  - 128. Traumatic brain injury
    - Incidence and prevalence of head injury
    - General approach to the patient with a head injury
    - Pathophysiology
    - Neurologic assessment
    - Diagnostic tests and monitoring
    - Treatment
    - Prognosis
    - References
  - 129. Wound management
    - Wound healing principles
    - Initial patient assessment
    - Debridement and lavage
    - Dressing and bandaging
    - Wound closure
    - Additional wound management modalities
    - Antimicrobial therapy
    - Patient care
    - Complications
    - Prognosis
    - References
  - 130. Thermal burn injury
    - Definitions
    - Patient assessment and medical management
    - Burn wound management
    - References
- **Part XV. Anesthesia and Pain Management**
  - 131. Pain assessment
    - Pain assessment guidelines and tools
    - Pain assessment in critically ill patients
    - References
  - 132. Sedation of the critically ill patient
    - Introduction

- Specific drug techniques for sedation
