- Preface to the 9th Edition
- Updates to the Book
- Updates: July 7, 2020
- Updates: July 1, 2020
- Updates: June 29, 2020
- Updates: June 25, 2020
- Updates: June 24, 2020
- Updates: June 19, 2020
- Updates: May 4, 2020
- Updates: April 16, 2020
- Updates: April 12, 2020
- Updates: March 31, 2020
- Updates: February 24, 2020
- Updates: February 19, 2020
- Updates: February 11, 2020
- Updates: February 10, 2020
- Updates: January 31, 2020
- Updates: January 1, 2020
- Updates: December 21, 2019
- Updates: December 15, 2019
- Updates: December 14, 2019
- Updates: December 3, 2019
- Updates: December 2, 2019
- Updates: November 25, 2019
- Updates: November 17, 2019
- Updates: November 7, 2020
- Volume 1
- I Basic Principles in the Diagnosis and Management of Infectious Diseases
- A Microbial Pathogenesis
- 1 A Molecular Perspective of Microbial Pathogenicity
- Attributes of Microbial Pathogens
- Evolution of Bacterial Pathogenicity
- Regulation of Bacterial Pathogenicity

- Close Encounters: Pathogens as Cell Biologists
- Identification and Characterization of Virulence Genes
- Molecular Microbiology at the Bedside: Pathogen Detection, Pathogen Discovery, and Genomic Profiling
- Dedication
- References
- 2 The Human Microbiome of Local Body Sites and Their Unique Biology
  - Defining the Human Microbiome
  - Oral Microbiome
  - Skin and Nasopharynx
  - Airway and Pulmonary Microbiome
  - Gastrointestinal Tract
  - Vaginal Microbiome
  - Group B Streptococcus
  - The Human Microbiome During Pregnancy
  - Summary and Future Directions
  - References
- 3 Prebiotics, Probiotics, and Synbiotics
  - Issues Regarding the Complexity and Variability of Probiotics
  - Clinical Studies of Probiotics
  - Proposed Mechanisms of Action of Probiotics
  - Potential Adverse Effects of Probiotic Therapy
  - Fecal Microbiota Transplant for Infectious Conditions Other Than Clostridioides Difficile Infection
  - Summary and Future Directions
  - Update
  - Reference
  - Reference
  - Reference
  - References
- B Host Defense Mechanisms
- 4 Innate (General or Nonspecific) Host Defense Mechanisms
  - Physical and Chemical Barriers to the Entry of Microorganisms Into the Body
  - Innate Immune Sensing of Invading Pathogens
  - Pathogen Interference With Innate Immune Responses
  - References
- 5 Adaptive Immunity
  - Immunoglobulin Structure
  - Effector Functions Mediated by Antibodies
  - Kinetics of Antibody Production and Diagnosis of Infections
  - Laboratory Measurement of Antibodies

- B-Cell Maturation and Immunoglobulin Production
- Antibody-Mediated Pathology
- Immunodeficiencies
- Therapeutic Uses of Antibodies
- References
- 6 Cell-Mediated Defense Against Infection
- T-Cell Subsets and Phenotypic Diversity
- T-Cell Memory
- T-Cell Development and Lymphoid Tissue Organization
- T-Cell Activation
- Innate Immune Recognition: Setting the Stage for T-Cell Responses
- Microbial Pathogenesis and the Cellular Immune System
- Primer on Basic Immunologic Techniques
- References
- 7 Mucosal Immunity
- Specialization of Host Responses in Mucosal Tissues
- Induction of Mucosal Immune Responses
- Role of Mucosal Immunity: Beyond the Mucosa
- Conclusions
- References
- 8 Granulocytic Phagocytes
- Neutrophils
- Eosinophils
- References
- 9 Complement and Deficiencies
- Complement Synthesis, Catabolism, and Distribution
- Complement Activation
- Regulation of Complement Activation
- Complement Receptors
- Families of Complement Proteins
- Complement-Mediated Functions
- Microbial Interactions With the Complement System
- Complement Deficiency States
- Complement in Disease States
- Evaluation and Treatment of Complement Disorders
- Acknowledgment
- References
- 10 Human Genetics and Infection
- Magnitude of the Host Genetic Effect
- Diseases
- Specific Susceptibility and Resistance Genes
- Evolutionary Perspective

- Applications
- References
- 11 Nutrition, Immunity, and Infection
- Epidemiology of Malnutrition
- Malnutrition and Immune Function
- Specific Nutrients and Their Roles in Immunity
- Overnutrition: Obesity and Infectious Diseases
- Special Populations: Clinical Trials of Nutritional Supplementation to Reduce Infection Risk
- Host Nutritional Status and Pathogen Virulence
- Acknowledgments
- References
- 12 Evaluation of the Patient With Suspected Immunodeficiency
- Index of Suspicion
- Initial Evaluation
- Lymphocyte Immune Defects
- Phagocyte Immune Defects: Neutrophils
- Defects Affecting Phagocyte Signaling
- Phagocyte and Lymphocyte Defects Affecting Mononuclear Cells
- References
- C Epidemiology of Infectious Disease
- 13 Applied Epidemiology for the Infectious Diseases Physician
- What Is Epidemiology?
- What Can Epidemiology Tell the Infectious Disease Clinician?
- The Epidemiologic Triad Model: Agent, Host, and Environment
- The Sufficient-Component Cause Model of Epidemiology
- Other Methods to Characterize Infection Transmission
- Descriptive Epidemiology
- Analytic Epidemiology
- Experimental Studies
- Observational Studies
- Determining the Appropriate Epidemiologic Study Design
- Basic Biostatistics
- Statistical Significance
- Disease Surveillance
- Disease Prevention
- Disease Control: Quarantine and Isolation
- Outbreak Investigation Primer
- Outbreak Epidemiology
- Key Outbreak Principles
- Types of Outbreaks
- Outbreak Investigation and Response
- References

- 14 Emerging and Reemerging Infectious Disease Threats
- Infectious Causes of Chronic Diseases
- Factors That Favor Disease Spread
- Antimicrobial Resistance
- Acute Respiratory Tract Infections
- Enteric Diseases
- Vector-Borne Diseases
- Ebola and Marburg Hemorrhagic Fevers
- Conclusion: Controlling the Threats
- Acknowledgments
- References
- 15 Bioterrorism
- Defining Biological Warfare, Bioterrorism, and Biocrimes
- History of Biological Weapons Development and Use in Warfare and Against Insurgencies
- Limiting Use of Biological Weapons: the Biological Weapons Convention
- History of Biological Weapons Use to Commit Acts of Bioterrorism
- Classifications of Biological Agents of Concern
- Addressing the Highest Priority Biological Agents
- Clinical Aspects of High-Consequence Bioterrorism Pathogens
- Bioterrorism Incidents
- Acknowledgment
- References
- D Clinical Microbiology
- 16 The Clinician and the Microbiology Laboratory
- Microorganisms Hazardous to Laboratory Workers
- Taxonomy
- Infection Prevention and Control
- Bacterial, Mycobacterial, and Fungal Identification
- Antibacterial Susceptibility Testing
- Antimicrobial Stewardship
- Specimen Selection, Collection, Transportation, and Initial Processing
- Specific Specimen Guidelines and Initial Laboratory Processing
- Acknowledgments
- Update
- References
- References
- E Antiinfective Therapy
- 17 Principles of Antiinfective Therapy
- The Antibiotic Miracle: What We Are Fighting for
- The Societal Trust of Antibiotics Must Underpin Principles of Use

- Fundamental Principles of Antibiotic Therapy
- Controversial Principles of Antibiotic Therapy
- Conclusions
- References
- 18 Molecular Mechanisms of Antibiotic Resistance in Bacteria
- Molecular Genetics of Antibiotic Resistance
- Molecular Mechanisms of Antibiotic Resistance
- Multidrug-Resistance Mechanisms Among Bacteria
- Control of Antibiotic Resistance
- References
- 19 Pharmacokinetics and Pharmacodynamics of Antiinfective Agents
- Pharmacokinetics
- Pharmacodynamics
- Conclusions
- References
- 20 Penicillins and  $\beta$ -Lactamase Inhibitors
- Penicillins
- Properties of Individual Penicillins
- $\beta$ -Lactamase Inhibitors and Inhibitor Combinations
- References
- 21 Cephalosporins
- Chemistry
- Classification
- Mechanism of Action
- Spectrum of Activity
- Mechanisms of Resistance
- Pharmacologic Properties
- Adverse Reactions and Toxicities
- Major Clinical Uses of Cephalosporin Antibiotics
- References
- 22 Ertapenem, Imipenem, Meropenem, Doripenem, and Aztreonam
- Carbapenems
- Carbapenem-Resistant Enterobacteriaceae
- Monobactams
- References
- 23 Antibiotic Allergy
- Pathophysiology
- Clinical Manifestations
- Diagnosis and Management of Antibiotic Allergy
- Drug Allergy to Specific Antimicrobial Agents
- Antibiotic Allergy and Antimicrobial Stewardship

- Multiple Drug Intolerance Syndrome
- References
- 24 Fusidic Acid
- Structure and Mechanism of Action
- Antimicrobial Activity
- Resistance
- Administration and Dosing
- Pharmacokinetics and Pharmacodynamics
- Adverse Reactions
- Clinical Uses
- References
- 25 Aminoglycosides
- Chemistry
- Mechanisms of Action
- Mechanisms of Resistance
- Antimicrobial Activity
- Clinical Pharmacology
- Clinical Indications
- Prophylaxis
- References
- 26 Tetracyclines, Glycylcyclines, and Chloramphenicol
- Tetracyclines
- Glycylcyclines
- New Drug Approvals: Eravacycline and Omadacycline
- Chloramphenicol
- Acknowledgment
- References
- 27 Rifamycins
- Structure and Mechanism of Action
- Mechanisms of Resistance
- Shared Properties of the Rifamycins
- Rifampin
- Rifabutin
- Rifapentine
- Rifaximin
- Immune-Modulating Effects of Rifampin
- Rifamycins for the Treatment of Tuberculosis
- Rifamycins for Treatment of Latent Tuberculosis Infection
- Rifamycins for Nontuberculous Mycobacterial Infections
- Rifamycins for Nontuberculous Mycobacterial Infections
- Second-Line Indications for Rifamycins
- Novel and Future Indications for Rifampin
- Rifaximin: a Selective Gastrointestinal Rifamycin

- Rifalazil
- Rifamycins in Development
- References
- 28 Metronidazole
- History
- Mechanism of Action
- Spectrum of Activity
- Effects on the Human Microbiome
- Pharmacology
- Adverse Effects, Contraindications, and Precautions
- Mechanisms of Resistance
- Clinical Uses
- Drug Interactions and Interference With Laboratory Tests
- Other Nitroimidazole Antimicrobials
- References
- 29 Macrolides and Clindamycin
- Erythromycin
- Azithromycin and Clarithromycin
- Ketolides
- Lincomycin and Clindamycin
- Acknowledgments
- Update
- References
- References
- 30 Glycopeptides (Vancomycin and Teicoplanin) and Lipoglycopeptides (Telavancin, Oritavancin, and Dalbavancin)
- Glycopeptides
- Lipoglycopeptides
- Conclusions
- References
- 31 Daptomycin and Quinupristin-Dalfopristin
- Daptomycin
- Streptogramins
- References
- 32 Polymyxins (Polymyxin B and Colistin)
- Structure, Source, and Available Preparations
- Mechanism of Action
- Antimicrobial Activity
- Pharmacokinetics
- Pharmacodynamics
- Toxicity
- Clinical Use
- References

- 33 Linezolid, Tedizolid, and Other Oxazolidinones
- Chemical Structure
- Mechanism of Action
- Antimicrobial Activity
- Resistance
- Pharmacology
- Clinical Use
- Untoward Reactions
- Linezolid Versus Tedizolid
- Other Oxazolidinones
- Update
- Reference
- References
- 34 Sulfonamides and Trimethoprim; Trimethoprim-Sulfamethoxazole
- Sulfonamides
- Trimethoprim
- Trimethoprim-Sulfamethoxazole
- Iclaprim
- References
- 35 Quinolones
- Chemical Structures
- Mechanism of Action
- Mechanisms of Acquired Bacterial Resistance
- Antimicrobial Activity
- Pharmacology
- Clinical Uses
- Problems With Quinolone Resistance During Clinical Use
- Adverse Effects
- References
- 36 Unique Antibacterial Agents
- Multidrug-Resistant Bacteria
- Overall Conclusions
- Acknowledgments
- References
- 37 Urinary Tract Agents
- Nitrofurantoin
- Fosfomycin
- Methenamine
- References
- 38 Topical Antibacterials
- General Uses of Topical Antibacterials
- Specific Topical Antibacterials
