

TABLE OF CONTENTS

Domestic Animals as Comparative Models to Humans.

Equine Exercise Physiology: A Historical Perspective.

The Pig Model for the Study of Obesity and Associated Metabolic Diseases.

Growth Hormone and the Chick Eye.

Porosome Enables the Establishment of *Fusion Pore* at its Base and the Consequent Kiss-and-Run Mechanism of Secretion from Cells.

Molecular Regulation of Growth / Metabolic Efficiency.

Epigenetics and Developmental Programming in Ruminants – Long-Term Impacts on Growth and Development.

Molecular Physiology of Feed Efficiency in Beef Cattle.

Hormonal Control of Energy Substrate Utilization and Energy Metabolism in Domestic Animals.

Reproduction.

Reproduction in Poultry: An Overview.

Animal Stress and Welfare.

Stress in Livestock Animals: From Domestication to Factory Production.

Biology of Stress in Livestock and Poultry.

Future Directions. Nutrient Transporter Gene Expression in Poultry, Livestock and Fish.

Novel Peptides in Poultry: A Case Study of the Expanding Glucagon Peptide Superfamily in Chickens (*Gallus gallus*).
