

TABLE OF CONTENTS

1. Development and Cell Biology

1. Front Matter

Pages 1-1

2. Zebrafish Wnt/ β -Catenin Signaling Reporters Facilitate Understanding of In Vivo Dynamic Regulation and Discovery of Therapeutic Agents

▪ Tohru Ishitani, Juqi Zou

Pages 3-16

3. Endothelial Cell Dynamics during Blood Vessel Morphogenesis

▪ Li-Kun Phng

Pages 17-35

4. Development of Hematopoietic Stem Cells in Zebrafish

▪ Isao Kobayashi

Pages 37-57

5. Rohon-Beard Neuron in Zebrafish

▪ Kazutoyo Ogino, Hiromi Hirata

Pages 59-81

2. Homeostasis and Reproduction

1. Front Matter

Pages 83-83

2. Fish in Space Shedding Light on Gravitational Biology

▪ Masahiro Chatani, Akira Kudo

Pages 85-97

3. Small Teleosts Provide Hints Toward Understanding the Evolution of the Central Regulatory Mechanisms of Reproduction

▪ Shinji Kanda

Pages 99-111

4. Diversified Sex Characteristics Developments in Teleost Fishes: Implication for Evolution of Androgen Receptor (AR) Gene Function

- Yukiko Ogino, Gen Yamada, Taisen Iguchi

Pages 113-126

3. Clinical Models

1. Front Matter

Pages 127-127

2. Zebrafish Angiogenesis and Valve Morphogenesis: Insights from Development and Disease Models

- Matina Katraki-Pavlou, Dimitris Beis

Pages 129-150

3. Advances in the Understanding of Skeletal Myopathies from Zebrafish Models

- Emily Claire Baxter, Robert J. Bryson-Richardson

Pages 151-183

4. Zebrafish Models of Muscular Dystrophies and Congenital Myopathies

- Hiroaki Mitsuhashi

Pages 185-215

5. Emergence of Zebrafish as a Model System for Understanding Human Scoliosis

- Long Guo, Shiro Ikegawa, Chisa Shukunami

Pages 217-234

6. Medaka Fish Model of Parkinson's Disease

- Norihito Uemura, Ryosuke Takahashi

Pages 235-249

4. Eccentric Fish

1. Front Matter

Pages 251-251

2. “Out of the Dark” Cavefish Are Entering Biomedical Research

- Nicolas Rohner

Pages 253-268

3. *Xenotoca eiseni*, a Viviparous Teleost, Possesses a Trophotaenial Placenta for Maternal Nutrient Intake

- Atsuo Iida

Pages 269-278

4. Mormyrid Electric Fish as a Model to Study Cellular and Molecular Basis of Temporal Processing in the Brain

- Tsunehiko Kohashi

Pages 279-294.
