

• TABLE OF CONTENTS

Introduction

Kannan Karupiah, Mithun Khattar

1. Transplantable Syngeneic Tumor Models

Richard Woessner, Simon Dovedi, Robert Wilkinson

2. Genetically Engineered Mouse Models (GEMM) in Cancer Immunotherapy R&D

Zhao Chen

3. Mouse Tumor Homografts Recapitulate Human Molecular Pathogenesis

Rajendra Kumari, Davy Ouyang, Henry Li.

4. Modeling Resistance to Immune Checkpoint Blockade

Michael Quigley, Matthew J. Meyer and Kanstantsin Katlinski

5. Orthotopic Mouse Models of Colorectal Cancer and Imaging Techniques

Ce Yuan, Xianda Zhao, Dechen Wangmo, Duha Alshareef, Subbaya Subramanian

6. Preclinical Osteoimmuno-oncology Models to Study Effects of Immunotherapies on Bone Metastasis

Tiina E. Kähkönen, Jussi M. Halleen, Jenni Bernoulli

7. Humanized mouse models for cancer immunotherapy: a focus on human PBMC and HSPC reconstitution

Zhuo Li, Xiao Yang, Xiaomin Song

8. Bone Marrow-Liver-Thymus (BLT) Humanized Mice as a Tool to Assess Checkpoint Inhibitor Adverse Events

Kenrick M. Semple, Alan D. Knapton and Kristina E. Howard

9. Development of Swine Models for Cancer Research: SCID Pigs and Other Emerging Pig Models

Adeline N Boettcher and Christopher K Tuggle

Index.
