

Table of contents

CHAPTER 1 BASIC PRINCIPLES OF RADIOGRAPHY

Fundamentals of radiography.

Definition of X-rays

X-ray production

The parts of an X-ray machine

How X-rays interact with matter

Image formation

The cassette

Radiographic film

Image intensifying or strengthening screens

The development process

Negatoscope or X-ray film viewers

Digital radiography.

Digital X-ray systems

Native data and image algorithms

DICOM format

Software

Viewing

Image archiving and management

Technical recommendations in digital radiography.

Digital radiography image quality.

Radiation protection

[International Commission on Radiological Protection](#)

[Legal exposure limits](#)

[Training for exposed workers](#)

[Classification of work areas](#)

[Staff dosimetric control](#)

[General principles to limit radiation exposure](#)

[Radiation protection systems](#)

[General principles of X-ray interpretation](#)

[Radiographic technique](#)

[Radiograph identification](#)

[X-ray image quality](#)

[Radiographic density and contrast](#)

[Image geometry](#)

[Scatter or diffuse radiation](#)

[Radiographic patient positioning and projections](#)

[Technical artifacts and errors](#)

[Radiology reports](#)

[Atlas of radiographic positioning and anatomy](#)

[Abdomen](#)

[Neck](#)

[Thorax](#)

[Appendicular skeleton](#)

[Thoracic limb](#)

[Scapula](#)

[Shoulder](#)

[Humerus](#)

[Elbow](#)

[Radius-ulna](#)

[Carpus](#)

[Metacarpus-phalanges](#)

[Pelvic limb](#)

[Hip](#)

[Femur](#)

[Knee](#)

[Tibia-fibula](#)

[Tarsus](#)

[Metatarsus-phalanges](#)

[Spine](#)

[Head](#)

CHAPTER 2 **ABDOMEN**

Principles of interpretation

Abdominal wall

Peritoneal cavity and retroperitoneal space

[Pneumoperitoneum](#)

[Free fluid](#)

[Peritonitis and retroperitonitis](#)

[Peritoneal carcinomatosis](#)

[Masses](#)

Liver, spleen and lymph nodes

[Liver](#)

[Spleen](#)

[Lymph nodes](#)

Urinary system

[Kidneys](#)

[Excretory urography.](#)

[Percutaneous pyelography.](#)

[Ureters](#)

[Bladder](#)

[Positive-contrast cystography.](#)

[Negative-contrast cystography_\(pneumocystography\).](#)

[Double-contrast cystography.](#)

[Pathological alterations](#)

[Urethra](#)

Genital system

Genital system of the female

Genital system of the male

Stomach

Gastrography using barium sulphate

Positive-contrast gastrography using iodinated contrast media

Negative-contrast gastrography.

Double-contrast gastrography.

Pathological alterations

Small intestine

Large intestine

CHAPTER 3 NECK AND THORAX

Principles of interpretation

Neck

Thorax

Thoracic wall

Ribs

Sternum

Pharynx, larynx and trachea

Pharynx and larynx

Trachea

Oesophagus

Pleural space

Pleural effusion

Pneumothorax

Pleural masses

Pleural thickenings

Mediastinum

Mediastinal effusion

[Pneumomediastinum](#)

[Mediastinal masses](#)

[Displacement of the mediastinum](#)

Heart

[Size of the cardiac silhouette](#)

[Position of the cardiac chambers and great vessels](#)

[Radiographic signs of enlargement of the heart chambers](#)

[Great vessels](#)

[Acquired heart diseases](#)

[Acquired valvular disease](#)

[Cardiomyopathies](#)

[Dirofilariasis](#)

[Congenital cardiac diseases](#)

[Patent ductus arteriosus](#)

[Pulmonary stenosis](#)

[Aortic stenosis](#)

[Ventricular septal defect](#)

[Tetralogy of Fallot](#)

[Diseases of the pericardium](#)

[Cardiac tumours](#)

[Microcardia](#)

[Cor pulmonale](#)

Lung

[Abnormal lung patterns](#)

[Bronchial pattern](#)

[Vascular pattern](#)

[Alveolar pattern](#)

[Interstitial pattern](#)

[Mixed pattern](#)

[Lung hypertranslucency](#)

[Pulmonary neoplasia](#)

[Lung lobe torsion](#)

Pulmonary thromboembolism

CHAPTER 4 APPENDICULAR SKELETON

Principles of interpretation

Ossification and closure of growth plates

Osteolysis and osteogenesis

Patterns of osteolysis

Patterns of osteogenesis

Aggressive bone lesions versus non-aggressive

Soft tissues

Other imaging diagnostic techniques

Congenital, hereditary and developmental abnormalities

Chondrodysplasia

Epiphyseal chondrodysplasia

Physeal chondrodysplasia

Metaphyseal chondrodysplasia

Retained core of growth cartilage

Polymelia

Ectrodactyly

Hemimelia

Osteochondrosis and osteochondritis dissecans

Elbow dysplasia

Hip dysplasia

Hypertrophic osteodystrophy

Panosteitis

Femoral head avascular necrosis

Incomplete ossification of the humeral condyle

Spontaneous capital femoral physeal fracture in cats

Mucopolysaccharidosis

Fractures

Deformities due to growth plate alteration

Bone tumours and osteomyelitis

Bone tumours

Osteomyelitis

Nutritional and metabolic alterations

Secondary nutritional hyperparathyroidism

Secondary renal hyperparathyroidism

Hypophyseal dwarfism

Hypervitaminosis A

Joint disease

Radiographic signs of joint disease

Increased synovial volume

Altered thickness of the joint space

Decreased subchondral bone opacity

Increased subchondral bone opacity

Osteophytes and enthesophytes

Soft tissue calcification

Intra-articular bodies (arthroliths)

Joint incongruence

Joint malformation

Intra-articular gas

Ligament injuries

Tendon lesions

Sesamoids

Luxations and subluxations

Degenerative joint disease

Infection

Immune-mediated polyarthropathy

Joint tumours

Other appendicular skeleton abnormalities

Pulmonary hypertrophic osteopathy

Circumscribed calcinosis
Multiple cartilaginous exostoses

CHAPTER 5 SPINE

Principles of interpretation

Myelography

Congenital disorders

Hemivertebra

Block vertebra

Transitional vertebra

Spina bifida

Instability syndromes

Atlantoaxial instability

Cervical instability

Lumbosacral instability

Degenerative intervertebral disc disease

Other disorders of the spine

Scoliosis, kyphosis and lordosis

Spondylosis deformans

Dural ossification

Spondyloarthrosis

Diffuse idiopathic skeletal hyperostosis

Inflammation and infection

Fractures and luxations

Tumours

Hypervitaminosis A

Mucopolysaccharidosis

Osteopetrosis

Multiple cartilaginous exostoses

CHAPTER 6 HEAD

Principles of interpretation

Cranial vault

Congenital hydrocephalus

Occipital dysplasia

Fractures

Infection

Tumours

Nasal cavity and sinuses

Fractures

Rhinitis

Foreign bodies

Tumours

Mandible, maxilla and temporomandibular joint

Fractures

Temporomandibular joint luxation

Temporomandibular dysplasia

Temporomandibular joint ankylosis

Degenerative joint disease

Infection

Tumours

Craniomandibular osteopathy

Secondary renal hyperparathyroidism

Teeth

Periodontal disease

Periapical abscess

Tooth resorption

Tumours

Auditory system

Otitis externa

Otitis media

Tumours

Cholesteatoma

CHAPTER 7 MOST COMMON DIAGNOSTIC ERRORS

Abdomen

Lack of abdominal fat, wet hair

Underexposure and overexposure

Caudal hepatic border depending on thoracic conformation

Physiological organomegaly in young animals

False impression of splenomegaly

Gestation before foetal mineralisation

Superimposition of the prepuce and os penis

“Pseudomasses”

False thickening of the gastric or intestinal wall

Increase in the amount of gastric and intestinal fluid/gas

Anatomical variations of the gastrointestinal tract in cats

Intestinal particularities in dogs

Peristaltic waves

Inappropriate doses of contrast agent

Patterns of contrast medium accumulation

Presence of gas bubbles

Contrast diffusion

Neck and thorax

Confusion of the hyoid apparatus with foreign bodies

Cricopharyngeal sphincter

Cutaneous nodules and nipples

Calcification associated with age

Folds of skin

Rib curvature and costal cartilage calcification

False alterations of the trachea

False alterations of the oesophagus

Mediastinum in brachycephalic breeds and obese animals

False impression of cardiomegaly

Thymus

Coronary vessels

False pleural effusion

False pulmonary alterations

Appendicular skeleton

Radiographic technique

Age and breed

Incorrect positioning of the patient

Clavicle and sesamoid bones

Spine

Incorrect positioning of the patient

Overexposure and underexposure

Superimposed structures

Normal anatomical variations

Contrast medium in extradural space

Head

Incorrect positioning of the patient

Digital imaging

Greater definition of the elements of the lung

Higher pulmonary radiopacity

Higher tissue contrast

Overexposure

Metallic implants

Excessive post-processing

Excessive zooming
