

TABLE OF CONTENTS

Fundamentals of Veterinary Microbiology

Preface

1 The Bacterial Cell 1

2 Metabolism, Growth and Culture of Bacteria 9

3 Sterilisation and Disinfection 15

4 Bacterial Genes and Gene Transfer 23

5 Bacterial Pathogenicity 29

6 Bacterial Veterinary Vaccines 39

7 Antimicrobials: Action, Dynamics and Resistance 43

8 Bacterial Typing 51

9 Salmonella 55

10 Escherichia coli – An Intestinal Pathogen 63

11 Escherichia coli as an Extraintestinal Pathogen 69

12 Campylobacter – Hyperendemic on the Farm 75

13 Leptospira – Using Urine to Spread 81

14 Lyme Disease – Ticks and Dogs 87

15 Brachyspira 91

16 Pasteurella 93

17 Pseudomonas and Burkholderia 97

18 Bordetella 101

19 Delicate Gram-negative Bacteria 105

20 Mannheimia, Actinobacillus and Other Pasteurellaceae 111

21 Chlamydia – A Stealthy Pathogen 117

22 Bovine Tuberculosis and Johne's Disease 121

23 Bacillus anthracis 129

24 Clostridium 133

25 Staphylococcus – Skin and Soft Tissue Infection 143

26 Streptococcus 149

27	Nocardia, Actinomyces and Dermatophilus – The Filamentous Pathogens	155
28	Prescottella (Rhodococcus) equi	159
29	Corynebacterium – CLA	163
30	Listeria – Growing in the Fridge	165
31	Erysipelothrix and Trueperella	169
32	Mycoplasma – Cell-associated Pathogens	173
33	Rickettsia – Arthropod Vector-borne Pathogens	179
34	Fungi as Agents of Disease	183
35	Aspergillus – Strength in Numbers	187
36	Dermatophytes – Keratinolytic Fungi	191
37	Yeasts: Malassezia, Candida and Cryptococcus	195
38	Dimorphic Fungal Infections	199
	Index	205.
