

TABLE OF CONTENTS

01 INTRODUCTION 1

Evolution of pleura and lung ultrasound (PLUS) 2

Important considerations for PLUS 4

Presenting complaint, triage and physical exam 4

Clinically driven binary questions 6

Patient position 7

Sonographically-defined pleura and lung borders 8

Summary 10

References 11

02 GENERAL APPROACH 13

The Calgary Pleura and Lung Ultrasound (PLUS) approach 14

Contraindications and complications 14

Serial examinations 15

Machine functions 16

Transducer manipulations 17

Transducer orientation 20

Longitudinal (long) and transverse (short) axis 20

Patient positioning and preparation 20

Calgary PLUS approach 22

Application of the Calgary PLUS approach 32

Summary 32

03 PLUS IMAGE INTERPRETATION: NORMAL FINDINGS 35

General principles 36

The pleural line 37

A lines 38

The bat sign 40

Lung sliding (the glide sign) 42

Visualization of lung sliding 43

B lines 47

Curtain signs 49

Abdominal curtain signs 49

The pericardiodiaphragmatic (PD) window 54

Mediastinal triangle visible at the PD window 54

Mediastinal triangle obscured by lung at the PD window.....	54
Dry lung.....	56
“Ski jump” sign	58
Lung pulse.....	58
Z lines, I lines and E lines	60
Summary.....	61
References	62

04 CLINICAL APPLICATIONS OF PLUS: IS THERE PNEUMOTHORAX, YES/NO?	63
Introduction	64
Criteria to diagnose pneumothorax.....	65
Criteria to rule out pneumothorax	65
Criteria to rule in pneumothorax.....	66
The role of M mode to diagnose pneumothorax	83
Diagnostic approach.....	85
Transducer orientation/selection	85
Sonographic technique to identify pneumothorax.....	86
Pitfalls	89
Summary	89
References	90

05 CLINICAL APPLICATIONS OF PLUS: IS THERE PLEURAL EFFUSION, YES/NO?	91
Introduction	92
Criteria to diagnose pleural effusion	95
Criteria to rule out pleural effusion.....	95
Criteria to rule in pleural effusion	96
Criteria to differentiate pleural from pericardial effusion	96
The shape of pleural effusion.....	100
Diagnostic approach.....	101
Transducer orientation and selection	101
Patient positioning.....	102
Sonographic techniques to identify pleural effusion	102
Binary questions	106
Pitfalls	108
Summary	108
References	109

06 CLINICAL APPLICATIONS OF PLUS: ARE THERE INCREASED B LINES, YES/NO? 111

Introduction	112
Criteria to diagnose increased B lines	117
Criteria 1. Number of B lines within a single sonographic window.....	120
Criteria 2. Identification of B lines considering the PLUS profile over the entire hemithorax of the patient	123
Criteria to help identify increased B lines	125
Criteria to help identify the underlying cause of increased B lines	129
Criteria to rule out increased B lines.....	131
Diagnostic considerations for specific causes of increased B lines	132
Patient positioning.....	132
Pitfalls.....	134
Application of PLUS algorithm	135
Summary	136
References	137

07 CLINICAL APPLICATIONS OF PLUS: IS THERE LUNG CONSOLIDATION, YES/NO? 139

Introduction	140
Criteria to diagnose lung consolidation	145
Criteria to rule out lung consolidation.....	146
Criteria to rule in lung consolidation	147
Criteria to characterize lung consolidations.....	153
Is the consolidation partial (non-translobar) or translobar?	153
Partial consolidations: is it a shred, nodule or wedge sign?	153
Diagnostic approach.....	173
Transducer orientation and selection.....	174
Patient positioning.....	174
Sonographic technique to identify lung consolidation	174
Pitfalls.....	175
PLUS lung ultrasound profiles	178
Summary	180
References	182
