1 History, Physiology, Modality Options, and Safety for Diagnostic Imaging of the Oral Cavity 1

Brenda L. Mulherin

History of Diagnostic Imaging 1

Discovery of X-rays 1

Developing of Safety Measures 1

Shortening of Exposure Time 1

Glass Plates to Film 2

Progression to Digital 2

Philosophy of Diagnostic Imaging 2

Choosing the Appropriate Modality 2

Ability to Interpret Findings 3

Radiographic Indications 3

Documentation of Disease 3

Value of Full-Mouth Radiography 3

American Animal Hospital Association Guidelines Regarding Dental Radiography 3

Intraoral Dental Radiographic Equipment 3

Generators 3

Wall-Mounted Units 4

Handheld Units 4

Mobile Units/Castor-Mounted Units 4

Film 4

Standard Film 5

Digital Image Acquisition 6

Radiographic Imaging 7

Basic Unit of an X-ray 7

Milliamperes (mA), Kilovoltage Peak (kVp), and Exposure Time 8

Radiographic Densities 9

Radiopaque 9

Radiolucent 10

Digital Image Creation 10

Creation of a Digital Image 10

Digital Imaging and Communications in Medicine Format (DICOM) 10

Pixels 10

Advanced Imaging Modalities	10
Computed Tomography	10
Cone Beam Computed Tomography (CBCT)	12
Magnetic Resonance Imaging	13
Definitions Relating to Imaging Modalities	13
Sagittal Plane	13
Transverse Plane	13
Dorsal Plane	14
Computed Tomography Window Width and Window Level	14
Window Width	15
Window Level	15
Other Common Viewing Windows	16
Bone Window	16
Soft Tissue Window	16
Radiation Safety	16

2 Digital Dental Radiographic Positioning and Image Labeling 23

Brenda L. Mulherin and Chad Lothamer

Benefits to Proper Positioning	23
Practicing Techniques	23
Use of Position Indicating Device (PID)	23
Positioning Techniques	24
Patient Positioning	24
Sternal Recumbency	25
Dorsal Recumbency	25
Lateral Recumbency	25
Sensor/Phosphor Plate/Film Placement	26
Basic Positioning of Sensor	27
Eliminating Unused Film Space	29
Visualization of the Crown and Space Apical to Root	29
Intraoral Parallel Technique	30
Ideal Radiographic Technique	30
Placement of Sensor for Parallel Technique	31
Size Matters	31
Alternative Positioning	32
Parallel Technique for Cats	32
Intraoral Bisecting Angle Technique	32
Plane of the Tooth, Plane of the Film, and the Angle that Bisects	32
Shadow Game: Elongation, Foreshortening, and the Bisecting Angle	32
Axis of the Sensor, the Tooth, and the PID	33

Positioning of the Patient Matters	35
Anatomical Variations	36
Uses of the Bisecting Angle Technique	36
Occlusal Radiographic Technique	37
Feline Maxillary Premolar and Molar Teeth	37
Extraoral Technique	37
“Almost Parallel” or “Near Parallel” Technique	39
Localization of the Palatal Roots	39
Techniques for Imaging Caudal Teeth in Small Patients	43
Technique Errors	44
Foreshortening and Elongation	44
Cone Cutting	46
Missing the Apex	47
Overexposed or Underexposed	49
Artifacts	50
Repeat Radiographs	51
Conclusion	52
References	53

3 Interpretation of Normal Radiographic Anatomy 55

Brenda L. Mulherin

Value of Intraoral Radiographic Imaging	55
Quality of Images	56
Exposure Artifacts	56
Positioning Techniques	56
Parallel Technique	56
Bisecting Angle Technique	56
Positioning Artifacts	56
Elongation	56
Foreshortening	56
Cone Cutting	56
Missing the Apex	57
Mounting of Standard Dental Radiographs	57
Types of Mounting	57
Labial Mounting	57
Lingual Mounting	57
Labial Mounting of Standard Dental Radiographic Film	57
Lingual Mounting of Standard Radiographic Film	57
Digital Radiographic Mounting	58
Labial Mounting-Positioning of Teeth	59
Determining Maxilla from Mandible	59
Determining Right from Left	59
Modified Triadan Numbering System	62
Deciduous versus Permanent Teeth	65
Eruption Patterns	65
Mixed Dentition	66
Interpretation of Images	70
Tooth Root Numbers	75
Maxillary Teeth	75
Mandibular Teeth	77
Evaluation of the Structures	82
Crown	84

Root	90
Bone	105
Interpretation of Radiographic Shadows	105
Nomenclature	107
Where to Begin?	109
Conclusion	110
References	117

4 Interpretation of Common Oral Pathology in the Canine Patient 119

Brenda L. Mulherin and Chanda Miles

Periodontal Disease	119
Stages of PD	120
Types of Bone Loss	123
Horizontal Bone Loss	123
Vertical Bone Loss	123
Furcation Bone Loss	124
Supernumerary Roots and Teeth	129
Canine Tooth Resorption	131
Types of Tooth Resorption	132
External Tooth Resorption	132
External Surface Resorption	132
Internal Tooth Resorption	134
Treatment of Tooth Resorption	134
Odontogenic Cysts	135
Dentigerous Cysts	135
Periapical Cysts	137
Treatment for Odontogenic Cysts	138
Tooth Fractures	138
Root Fractures	142
Retained Tooth Roots	142
Endodontic Disease	143
Etiology	143
Radiographic Signs of Endodontic Disease	148
Widened PDL Space	148
Loss of Lamina Dura	148
Periapical Lucency	148
External and Internal Root Resorption	149
Widened Pulp Canal	150
Pulp Canal Calcification	150
Apical Periodontitis	151
Acute Apical Abscess	151
Chronic Apical Abscess	152
Endodontic Therapy	154
Root Canal Therapy	154
Vital Pulp Therapy	156
Attrition and Abrasion	157
Eruption Abnormalities	159
Persistent Deciduous Teeth	159
Unerupted Teeth	162
Abnormal Eruption	163
Conclusion	165
References	165

5 Interpretation of Common Pathology in the Feline Patient 167

Brenda L. Mulherin and Chanda Miles

Periodontal Disease 167

Types of Bone Loss 168

Buccal Alveolar Expansile Osteitis (BAEO) 168

Tooth Resorption 168

Stages and Types of Feline Tooth Resorption 177

Stages of Tooth Resorption 177

Types of Tooth Resorption 180

Criteria for Performing Crown Amputation/Intentional Root Retention 180

Supraeruption/Extrusion 185

Osteomyelitis and Osteitis 185

Retained Tooth Roots 187

Endodontic Disease 187

Conclusion 190

References 198

6 Oral Surgery: Neoplasia and Cystic Conditions 199

Megan Mickelson

Radiographic Indications of Neoplasia (Benign and Malignant) 199

Benign Oral Tumors 200

Canine Acanthomatous Ameloblastoma (CAA) 200

Peripheral Odontogenic Fibroma (POF) 200

Feline Inductive Odontogenic Tumor (FIOT) 201

Malignant Oral Tumors 201

Nontonsillar Squamous Cell Carcinoma (SCC) 201

Papillary Squamous Cell Carcinoma (PSCC) 203

Oral Malignant Melanoma (MM) 204

Fibrosarcoma (FSA) 206

Osteosarcoma (OSA) 206

Multilobular Osteochondrosarcoma (MLO) 208

Radiographic Indications of Cystic Conditions 209

Dentigerous Cyst 209

Radicular Cyst 212

Canine Furcation Cyst 213

Surgical Ciliated Cyst 213

Lateral Periodontal Cyst 213

Odontogenic Keratocyst (OKC)/Canine Odontogenic Parakeratinized Cyst (COPC) 216

Compound and Complex Odontomas 216

Limitations of Dental Radiography for Neoplasia 216

Conclusion 230

References 230

7 Interpretation of Uncommon Pathology in the Canine and Feline Patient 235

Brenda Mulherin, Chanda Miles, and Michael Congiusta

Introduction 235

Uncommon Conditions with Predilection for Canine Patients 235

Cranio-mandibular Osteopathy (CMO) 235

Idiopathic Calvarial Hyperostosis 237

Periostitis Ossificans (PO) 237

Malformed Roots/Root Hypoplasia 238

Dens Invaginatus/Dens in Dente 240

Uncommon Conditions Observed in both Canine and Feline Patients	245
Masticatory Myositis	245
Pulp Stones and Denticles	246
Osteosclerosis	247
Renal Secondary Hyperparathyroidism	248
Enamel Pearls	253
Uncommon Conditions with Predilection for Feline Patients	253
Dentition Abnormalities	253
Fused Roots	254
Supernumerary Roots	256
Supernumerary Teeth	257
Abnormal Eruption	257
Unerupted Teeth	258
Patellar Fracture and Dental Anomaly Syndrome (PADS) or Knees and Teeth Syndrome	258
Conclusion	262
Acknowledgment	262
References	262

8 Diagnostic Imaging of Exotic Pet Mammals and Zoo Animals 265

<i>June Olds</i>	
Dental Diagnostic Imaging for Nontraditional (Exotic) Animals	265
General Considerations for Exotic Companion Mammals	266
Restraint	266
Knowledge of Normal Anatomy	266
General Positioning and Projection	
Recommendations	267
Standard Radiography	267
Standard Radiographic Positions	267
Intraoral Radiographs	272
Intraoral Films Used Extraorally	275
Magnification Techniques	275
Anatomical Variations	275
Rabbits	275
Guinea Pigs and Chinchillas	276
Rats, Mice, Hamsters, Gerbils, and Other Commonly Kept Rodent Pets	283
Ferrets	287
African Pygmy Hedgehogs	287
Sugar Gliders	289
Prairie Dogs (<i>Cynomys ludovicianus</i>)	293
Captive Nondomestic or “Wild” Mammals	293
Nonhuman Primates	293
Carnivores	297
Radiographic Positioning and Techniques in Captive Animals	297
Animal Training	300
Other Dental Conditions in Zoologic Animals	304
Trauma	304
Attrition	304
Macropod Progressive Periodontal Disease (MPPD)	304
Molar Progression	308
Advanced Diagnostic Imaging in Exotic Pet Mammals and Zoo Animals	308
Standard Computed Tomography	308
Cone Beam Computed Tomography	312
Micro-computed Tomography	316

Considerations for Computed Tomography	321
Conclusion	326
Acknowledgment	327
References	327

9 Diagnostic Imaging and Interpretation of the Equine Patient 331

Joan Howard, Molly Rice, Kara Frerichs, and Beatrice Sponseller

Introduction to Equine Dental Radiographs	331
Radiation Safety	332
Radiographic Systems	332
Direct Digital Radiographic System (DR)	332
Computed Tomography	332
Standard Radiographic System	332
Radiographic Technique	332
Guidelines for Radiographic Views	332
Concepts to Understand	332
Directing the Primary Beam Through the Interproximal Spaces	333
Open Mouth Oblique Cheek Teeth Projections	334
Radiographic Views	334
Lateral View	334
Dorsoventral View	336
Dorsal Ventral Oblique Projection of the Maxillary Cheek Teeth	338
Ventral Dorsal Oblique Projection of the Maxillary Cheek Teeth	340
Ventral Dorsal Oblique Projection of the Mandibular Cheek Teeth	340
Dorsal Ventral Oblique Projection of the Mandibular Cheek Teeth	340
Occlusal Intraoral View of the Maxillary Incisors and Canines	340
Occlusal Intraoral View of the Mandibular Incisors and Canines	343
Evaluation of an Image	346
Labial Mounting	346
Radiographic Anatomy	347
Radiographic Changes in Dental Disease	350
Equine Odontoclastic Tooth Resorption and Hypercementosis (EOTRH)	352
Apical Infections	353
Periodontal Disease	354
Sinusitis	356
Neoplasia	357
Other Suggested Abnormalities to be Radiographed	358
Conclusion	360
Acknowledgment	372
References	372

10 Advanced Imaging of the Oral Cavity 373

Stephanie Goldschmidt

Introduction to the Use of Advanced Imaging Techniques in the Maxillofacial Region	373
Magnetic Resonance Imaging (MRI)	373
Technical Principles of MRI	373
T1- and T2-Weighted Sequences	374
Other MRI Sequences	375
Indications for Use of MRI over CT in the Maxillofacial Region	376
Temporomandibular Joint Disease (TMD)	376
Salivary Gland Disease	376
Abnormalities in the Muscles of Mastication and Inability to Open/Close the Mouth	376
Conclusions on the Clinical Indication for Use of MRI	377

Computed Tomography (CT)	379
Technical Principles of Multidetector CT (MDCT) Scanners	380
Technical Principles of Cone Beam CT (CBCT) Scanners	382
Viewing CT Images	383
Differences in Image Characteristics Between CBCT and MDCT	387
Spatial Resolution	387
Soft Tissue Imaging	387
Artifacts	389
Other Impactful Differences in Practical Use Between MDCT and CBCT	389
Indications for Use of Either MDCT or CBCT in the Maxillofacial Region	389
Maxillofacial Trauma	389
Bony Pathology	390
Osteomyelitis/Osteonecrosis	390
Fibro-Osseous Disease	390
Osseous Neoplasia	391
Clefts	392
Indications for Multidetector CT only (not CBCT) in the Maxillofacial Region	395
Oral Neoplasia with a Soft Tissue Component	395
Soft Tissue Pathology	395
Indications for CBCT only (not MDCT) in the Maxillofacial Region	395
Dentoalveolar Trauma	396
Periodontal Disease	396
Endodontic Disease	396
Tooth Resorption	399
Diagnosis and Treatment of Missing Teeth	401
Conclusions on the Clinical Indication for Use of CBCT Versus MDCT	402
References	402

Index	407
