

# Table of contents

## SECTION 1 - HYPOTHALAMUS AND PITUITARY

### **Chapter 1** Pituitary anatomy and physiology

Sara Galac, DVM, PhD

Pituitary anatomy

Pituitary physiology

Hormones of the adenohypophysis (AL)

Hormones of the neurohypophysis

### **Chapter 2** GH excess: acromegaly (hypersomatotropism)

Stijn J.M. Niessen, DVM, PhD, DECVIM, PGCertVetEd, FHEA,  
MRCVS Christopher J. Scudder, BVSc, PhD, DACVIM, MRCVS

Background and history

Incidence and pathogenesis

Pituitary pathology

Consequences of pituitary pathology

Clinical features and diagnosis

Treatment

Prognosis

### **Chapter 3** Other pituitary tumors

Guy C.M. Grinwis, DVM, PhD

Pituitary masses: hyperplasia, adenoma or carcinoma?  
Incidence and cell origins of pituitary tumors  
Effect of pituitary tumors on target organs and the direct effects of large tumors  
Functional consequences of autonomous hormone production

## **Chapter 4 Pituitary surgery**

Björn Meij, DVM, PhD, ECVS

Introduction and general observations  
Surgical anatomy  
Imaging of the feline pituitary gland  
Pituitary adenomas  
Transsphenoidal hypophysectomy  
Postoperative care  
Complications after pituitary surgery  
Prognosis

## **Chapter 5 Pituitary irradiation**

Alain P. Théon, MS, PhD, Dip ACVR-RO

Introduction  
Clinical presentation  
Advanced imaging  
Role of radiation therapy  
Modalities of radiation therapy  
Nonfunctioning tumors  
Growth hormone-secreting pituitary tumors and acromegaly  
Adrenocorticotrophic hormone-secreting pituitary tumors and feline Cushing's disease  
Radiation-related adverse effects

## **Chapter 6 Pituitary GH deficiency and pituitary dwarfism**

Dolores Pérez Alenza, DVM, PhD

Introduction

Etioopathogenesis  
Clinical features  
Differential diagnosis for failure to grow  
Diagnosis  
Treatment

## **Chapter 7** Polyuria, polydipsia and diabetes insipidus

Robert E. Shiel, MVB, PhD, PGDipUTL, DECVIM-CA

Introduction  
Water requirements in healthy cats  
Urine concentrating ability in healthy cats  
Mechanisms of water retention  
Causes of polyuria and polydipsia in cats  
The diagnostic approach to polyuria and polydipsia  
Treatment of central diabetes insipidus  
Prognosis

## **SECTION 2 - THYROID GLAND**

Editor: Dr. Mark E. Peterson, DVM, DACVIM (SAIM)

## **Chapter 8** Thyroid anatomy and physiology

Duncan C. Ferguson, VMD, PhD, DACVIM, DACVCP

Anatomy of the feline thyroid gland  
General thyroid physiology  
Serum protein binding of thyroid hormones  
Hypothalamic-pituitary-thyroid axis  
Extrathyroidal metabolism of thyroid hormone  
Thyroid hormone kinetics in the cat  
Action of thyroid hormone

## **Chapter 9** Hyperthyroidism: background, etioopathogenesis and changing

## prevalence of feline thyroid disease

Mark E. Peterson, DVM, DACVIM (SAIM)

History of thyroid disease in cats

Studies into the etiopathology of feline hyperthyroidism

Epidemiology of hyperthyroidism: a common worldwide disorder of senior to geriatric cats

Why has feline nodular goiter reached such epidemic proportions?

Conclusions

## Chapter 10 Hyperthyroidism: clinical signs and physical examination findings

Meredith L. Miller, DVM, DACVIM (SAIM) John F. Randolph, DVM, DACVIM (SAIM)

Mark E. Peterson, DVM, DACVIM (SAIM)

Signalment

Clinical signs

Physical examination

## Chapter 11 Hyperthyroidism: laboratory diagnosis

Carmel T. Mooney, MVB, MPhil, PhD, DECVIM-CA

Clinicopathologic abnormalities associated with hyperthyroidism

Thyroid hormone abnormalities associated with hyperthyroidism

Other diagnostic tests

Conclusion

## Chapter 12 Thyroid and kidney disease in cats

Tim Williams, MA, VetMB, PhD, FRCPath, Dip. ECVCP, MRCVS

Hyperthyroidism and chronic kidney disease (CKD)

Effect of hyperthyroidism on serum test results of renal function

Effect of hyperthyroidism on urinary markers of renal function

Effect of hyperthyroidism on systolic blood pressure

Effect of treatment of hyperthyroidism on renal function

Effect of azotemia on how hyperthyroid cats are managed

Suggested management strategies for hyperthyroid cats with CKD

## Chapter 13 Thyroid imaging

Michael R. Broome, DVM, MS, DABVP Mark E. Peterson, DVM, DACVIM (SAIM)

Introduction

Thyroid embryology, radiographic anatomy, and ectopic thyroid tissue

Normal thyroid

Hyperthyroidism

Ectopic thyroid

Thyroid carcinoma

Thyroid cysts

Hypothyroidism

## Chapter 14 Treatment of hyperthyroidism: antithyroid drugs

Sylvie Daminet DACVIM, DECVIM-CA, Msc, PhD

Considerations prior to initiating therapy with antithyroid drugs

Mechanism of action of antithyroid drugs

Formulations of antithyroid drugs

Dosages of antithyroid drugs

Adverse reactions with antithyroid drugs

Monitoring cats treated with antithyroid drugs

Other drugs of interest in managing hyperthyroid cats

Success rate and survival in hyperthyroid cats managed with an antithyroid drug

Renal function and hyperthyroidism

Conclusion

## Chapter 15 Treatment of hyperthyroidism: surgical thyroidectomy

James A. Flanders, DVM, DACVS

Introduction and overview

Anatomy of the thyroid gland and surrounding structures

Preoperative evaluation

General anesthesia  
Feline thyroidectomy techniques  
Perioperative complications  
Postoperative recurrence of hyperthyroidism  
Surgical excision of thyroid adenocarcinoma  
Summary and conclusions

## **Chapter 16** Treatment of hyperthyroidism: radioiodine

Mark E. Peterson, DVM, DACVIM  
M<sup>a</sup> del Pilar Xifra, BVSc  
Michael R. Broome, DVM, MS, DABVP

Introduction  
Advantages and disadvantages of radioiodine treatment of hyperthyroidism  
Principles of radioiodine treatment  
Specific indications for radioiodine treatment  
Patient selection and preparation before radioiodine treatment  
Thyroid scintigraphy for evaluation of hyperthyroid cats before <sup>131</sup>I treatment  
Estimation of the radioiodine dose to administer to cats with hyperthyroidism  
Adverse effects or complications associated with radioiodine treatment  
Follow-up thyroid function testing after radioiodine treatment  
Prognosis after radioiodine treatment

## **Chapter 17** Treatment of hyperthyroidism: diet

John P. Loftus, PhD, DVM, DACVIM (SAIM) Mark E. Peterson, DVM, DACVIM (SAIM)

General nutritional assessment for the hyperthyroid cat  
Weight loss and muscle wasting  
Nutrients needed for the hyperthyroid cat  
Nutritional management of feline hyperthyroidism: feeding a low-iodine diet

## **Chapter 18** Treatment of hyperthyroidism: severe, unresponsive, or recurrent hyperthyroidism

Michael R. Broome, DVM, MS, DABVP Mark E. Peterson, DVM, DACVIM (SAIM)

Introduction

Etiology and pathogenesis of severe, unresponsive or recurrent hyperthyroidism

Correlation between the severity and duration of hyperthyroidism and the severity of clinical signs

Causes for treatment failure

Therapy for severe, unresponsive hyperthyroidism

Summary

## **Chapter 19** Hypothyroidism

Mark E. Peterson, DVM, DACVIM (SAIM)

Introduction

Causes of hypothyroidism

Clinical subtypes of hypothyroidism

- Naturally occurring, congenital hypothyroidism in kittens and junior cats

- Naturally occurring hypothyroidism in adult cats

- Iatrogenic hypothyroidism in adult cats

Refractory hypothyroidism

## **SECTION 3 - CALCIUM AND PARATHYROID GLANDS**

---

## **Chapter 20** Hypercalcemia

Thomas K. Graves, DVM, PhD, DACVIM

Overview

Calcium physiology

Laboratory testing  
Initial investigation in hypercalcemic cats  
Differential diagnosis of hypercalcemia

## **Chapter 21** Feline primary hypoparathyroidism and hypocalcemia

Barbara J. Skelly, MA, VetMB, PhD, CertSAM, DACVIM (Small Animal Internal Medicine), DECVIM-CA (Internal Medicine), MRCVS

Introduction  
Distribution of calcium in the body  
Control of calcium (Ca) homeostasis  
Hypocalcemia in people and dogs  
Hypoparathyroidism in cats  
Differential diagnosis of hypocalcemia  
Diagnostic testing  
Treatment

## **SECTION 4 - ADRENAL GLANDS**

### **Chapter 22** Adrenal anatomy and physiology

Sara Galac, DVM, PhD

Adrenal anatomy  
Adrenal physiology

### **Chapter 23** Cushing's syndrome (hypercortisolism)

Sara Galac, DVM PhD  
Dan Rosenberg, DVM, PhD

Introduction  
Etiology  
Clinical features  
Clinicopathological findings  
Endocrine testing  
Diagnostic imaging

Treatment  
Prognosis

## **Chapter 24** Primary hyperaldosteronism (Conn's syndrome)

Hans S. Kooistra, DVM, PhD, Dipl. ECVIM-CA

Introduction

Primary hyperaldosteronism

## **Chapter 25** Other adrenal cortical tumors and pheochromocytoma

Carlos Melián, DVM, PhD

Laura Pérez-López, DVM

Introduction and differential diagnosis

Working up a feline adrenal mass

Excessive progesterone production

Combined excesses in progesterone and aldosterone

Excessive androgen or estradiol production

Pheochromocytoma

Non-functional adrenal tumors

## **Chapter 26** Adrenal surgery via open and laparoscopic approaches

Philipp D. Mayhew, BVM&S, MRCVS, DACVS Jeffrey Mitchell, DVM

Introduction

Diagnostic evaluation

Case selection

Patient preparation

Surgical techniques

Post-operative care

Complications

## **Chapter 27** Feline hypoadrenocorticism

Ian Ramsey, BVSc, PhD, DSAM, Dipl. ECVIM-CA (Internal Medicine), FHEA, FRCVS

Introduction

Prevalence

Causes

Age, breed and gender

Clinical signs

Clinical pathology

Diagnostic imaging

Electrocardiography and echocardiography

Endocrine tests

Differential diagnoses

Treatment

Prognosis

## Chapter 28 Glucocorticoid therapy

Nadja S. Sieber-Ruckstuhl, Prof., Dr. Med. Vet., Dipl. ACVIM, Dipl. ECVIM-CA  
Claudia E. Reusch, Prof., Dr. Med. Vet., PhD, Dipl. ECVIM-CA

Physiology

Pharmacology

Therapeutic applications

Adverse effects

Glucocorticoid reduction protocol

## SECTION 5 - ENDOCRINE PANCREAS

### Chapter 29 Anatomy, histology and physiology of the feline endocrine pancreas

Thomas A. Lutz, Prof. Dr. med. vet.

Anatomy of the feline pancreas

Cell types

Cross-differentiation

General function of islet hormones

Secretory control

Relative importance of pancreatic hormones and their contribution to the pathophysiology of diabetes mellitus

Pancreatic amyloid as the most typical histological finding in diabetes mellitus

## **Chapter 30** Pathogenesis and clinical observations of uncomplicated diabetes mellitus

Eric Zini, Prof. Dr. Med. Vet., Dipl. ECVIM-CA

Introduction

Prevalence and epidemiology

Risk factors

Pathophysiologic mechanisms

DM and pancreatitis

Clinical and laboratory findings

Survival and prognostic factors

## **Chapter 31** Diabetic ketosis, ketoacidosis, and the hyperosmolar syndrome

Lucy J. Davison, MA, VetMB, PhD, DSAM, Dipl. ECVIM-CA, MRVCS

Introduction

Glucose homeostasis

Clinical presentation of DKA and HHS

Principles of management of DKA and HHS

Fluid and electrolyte therapy

Insulin therapy

Additional supportive therapy in DKA and HHS

Prognosis of DKA and HHS in cats

## **Chapter 32** Insulin treatment of diabetes mellitus

Federico Fracassi, DVM, PhD, Dipl. ECVIM-CA (Internal Medicine)

Aims of the treatment and management plan

Insulin therapy

Choosing an insulin

Frequency of insulin administration, initial insulin dose and change in the type of insulin  
Storage, mixing and dilution of insulin  
Owner education  
Insulin dosing pens

## **Chapter 33** Gastrointestinal hormones and the use of non-insulin therapies for diabetes mellitus

Chen Gilor, DVM, PhD, DACVIM

Introduction

Incretin hormones physiology and pharmacology

Metformin

Glipizide

Acarbose

SGLT-2 antagonists

Challenges in managing feline DM and potential uses of non-insulin therapies

## **Chapter 34** Dietary management for diabetes mellitus

Linda M Fleeman, BVSc, PhD, MANZCVS Charlotte R Bjørnvad, DVM, PhD, Dipl. ECVCN

Overview

Learning outcomes

Case 1: feeding cats that refuse or dislike their “diabetes diet”

Case 2: an insulin overdosed diabetic cat that has just recovered from a severe “hypo” (neuroglycopenia)

Case 3: non-prescription diet alternatives

Case 4: achieving weight loss in a diabetic cat

Case 5: managing diabetes in a cat with concurrent disease

Case 6: the client has looked up a lot of information about diabetes in cats on the internet

## **Chapter 35** Monitoring diabetes in cats

Claudia E. Reusch, Prof. Dr. Med Vet, Dipl. ECVIM-CA Elena Salesov,  
Dr. Med Vet

Clinical signs

Blood glucose monitoring

Continuous glucose monitoring systems (CGMS) and flash glucose  
monitoring systems

Urine glucose measurement

Fructosamine concentration

Glycated hemoglobin

## Chapter 36 Diabetic remission

Ruth Gostelow, BVetMed(Hons), MVetMed, DipACVIM, DipECVIM-  
CA, PhD

Definition of diabetic remission

Physiology of diabetic remission

Incidence of diabetic remission

Predictors of diabetic remission

Maximizing the likelihood of diabetic remission

Identification and management of the diabetic cat in remission

Prognosis and diabetic relapse

Conclusions

## Chapter 37 The unstable diabetic

Jacquie Rand, BVSc, DVSc, Dipl. ACVIM (Internal Medicine) Susan  
Gottlieb, BVSc, MANZCVS

Overview

Initial goals of therapy and factors that influence remission

Classification of diabetes mellitus and relevance to unstable  
diabetic cats

Inappropriate choice of insulin

Inappropriate dosing

Choice of intensive versus conservative insulin management of  
newly-diagnosed diabetics

Client factors

Underlying diseases

Rebound hypoglycemia (Somogyi)

The brittle diabetic  
Monitoring  
Other management strategies  
Conclusion

## Chapter 38 Hypoglycemia

Johan P. Schoeman, BVSc, MMedVet(Pretoria), PhD(Cantab),  
DSAM(RCVS-UK), DECVIM-CA, MRCVS

Introduction  
Pathophysiology of hypoglycemia  
Blood glucose measurement  
Differential diagnoses  
Specific diseases or syndromes associated with hypoglycemia in cats  
Diagnostic approach  
Treatment of hypoglycemia

# SECTION 6 - BLOOD PRESSURE, BODY CONDITION AND NUTRITION

---

## Chapter 39 Feline obesity

Juan José Ramos-Plá, DVM, PhD

Epidemiology  
Pathophysiology of obesity  
Obesity-related diseases  
Treatment

## Chapter 40 Disorders of lipid metabolism

Panagiotis G. Xenoulis, DVM, Dr.med.vet., PhD

Introduction  
The basics of lipoprotein metabolism

Definitions and measurement of feline serum lipid concentrations  
Effect of lipemia on the measurement of other analytes  
Causes of feline hyperlipidemia  
Clinical consequences of hyperlipidemia in cats  
Diagnostic approach to cats with hyperlipidemia  
Treatment of feline hyperlipidemia

## **Chapter 41** Cachexia and sarcopenia

Lisa M. Freeman, DVM, PhD, DACVN

Cachexia  
Sarcopenia  
Diagnosis of cachexia and sarcopenia  
Potential interventions for cachexia and sarcopenia  
Practical approach to treatment of cachexia and sarcopenia in cats  
Conclusion

## **Chapter 42** Hypertension

Andy H. Sparkes, BVetMed, PhD, DipECVIM, MANZCVS, MRCVS

Introduction  
Measurement of blood pressure in cats  
Defining hypertension and deciding when to treat  
Consequences of hypertension  
Endocrine causes of hypertension  
Management of hypertension

## **Annex** Conversion tables
